Persistent organic pollutants (POPs) are organic compounds that are resistant to environmental degradation through chemical, biological, and photolytic processes. Because of their persistence, POPs bioaccumulate with potential adverse impacts on human health and the environment. The effect of POPs on human and environmental health was discussed, with intention to eliminate or severely restrict ...

We are very pleased to report that, according to the newly released Journal Citation Reports® Science Edition (Thomson Reuters), the new Impact Factor for Polish Journal of Environmental Studies for 2017 has reached the level of 1.120. We are very happy with that achievement, which was gained greatly thanks to the efforts of our authors and referees.

The ability of various pollutants (and their derivatives) to mutually affect their toxic actions complicates the risk assessment based solely on environmental levels (Calabrese, 1991). Deleterious effects on populations are often difficult to detect in feral organisms since many of these effects tend to manifest only after longer periods of time.
