The Gurney flap (or wickerbill) is a small tab projecting from the trailing edge of a wing. Typically it is set at a right angle to the pressure-side surface of the airfoil and projects 1% to 2% of the wing chord. This trailing edge device can improve the performance of a simple airfoil to nearly the same level as a complex high-performance design.

Image: A sketch of the catapult mechanism by which the vortex shedding sequence behind a liquid wave throws droplets very high. Abstract: A droplet ejection mechanism in planar two-phase mixing layers is examined. Any disturbance on the gas-liquid interface grows into a Kelvin-Helmholtz wave and the wave crest forms a thin liquid film that traps as the wave grows downstream.

In continuum mechanics, the finite strain theory – also called large strain theory, or large deformation theory – deals with deformations in which strains and/or rotations are large enough to invalidate assumptions inherent in infinitesimal strain theory. In this case, the undeformed and deformed configurations of the continuum are significantly different, requiring a clear distinction between ...

A teoria do Big Bang depende de duas suposições principais: a universalidade das leis da física e o

princípio cosmológico, que afirma que, em grandes escalas, o universo é homogêneo e isotrópico. Essas ideias foram inicialmente tomadas como postulados, mas hoje há esforços para testar cada uma delas.

O Big Bang é o modelo cosmológico que descreve a origem e a evolução do universo. Segundo este modelo, o universo começou há cerca de 13,8 bilhões de anos em um estado extremamente quente e denso, e expandiu-se rapidamente, esfriando e formando a matéria e a radiação que vemos hoje. O modelo do Big Bang é baseado em observações como a expansão do universo e a radiação cósmica de fundo.
