Fig. 1. Animals through time. (A) Upper atmospheric oxygen concentration, as a percent of current levels, plotted against geological time. (B) Phylogenetic history of life on Earth, scaled to match the oxygen timeline. Note that the origin of the eukaryotes and the subsequent diversification of animals both correspond to periods of increasing atmospheric oxygen.

We show, via a massive (N = 689,003) experiment on Facebook, that emotional states can be transferred to others via emotional contagion, leading people to experience the same emotions without their awareness. We provide experimental evidence that emotional contagion occurs without direct interaction ...

### **KEY LOGISTICS TRENDS IN LIFE SCIENCES 2020 - DHL**

Of the various modes of oscillation, our main interest is the first antisymmetric mode. This is because of two reasons: the first antisymmetric mode involves the largest amount of liquid mass movement, and as we will see in the following section, its frequency corresponds to the driving frequency (at least approximately).

Here we propose two components for incorporation into an advanced life support system coupling anaerobic waste treatment to food production (). The first compartment consists of a fixed-film, flow-through anaerobic digester treating liquid and solid human waste to produce CO<sub>2</sub> and methane, as well as ammonium from urea and protein degradation. The treated effluent pH is raised (e.g. with NaOH ...

### **Coupling of anaerobic waste treatment to produce protein**

In a rapid communication just published in the Canadian Journal of Fisheries and Aquatic Sciences, biologist Douglas Swain of the Gulf Fisheries Centre and Robert Mohn, emeritus scientist, at the Bedford Institute of Oceanography present findings that suggest the delay in recovery of Atlantic cod on the eastern Scotian Shelf could be attributed to increased predation by grey seals or other ...

### **EARTH SCIENCES - CSIR**

Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate. Various forms of life exist, such as plants, animals, fungi, protists, archaea, and bacteria.

### **Life - Wikipedia**

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...
