structural mechanics in reactor pdf

Structural Mechanics in Reactor Technology (SMiRT) is the premium conference series bringing together nuclear industry and academic researchers to mark biannually advances in understanding and development of engineering solutions for the entire nuclear cycle – from plant design, through safe operation, to decommissioning and waste disposal.

forces, internal forces and deformation of structural materials. It is therefore necessary to clarify the various terms that are commonly used to describe these quantities. In large part, structural mechanics refers to solid mechanics because a solid is the only form of matter that can sustain loads parallel to the surface.

The underlying theories encompass the whole spectrum of structural mechanics. The Conference will make visible in concentrated form the great challenge and stimulus which reactor technology means for the structural analyst and the research worker in the field of engineering mechanics.
