A DNA microarray (also commonly known as DNA chip or biochip) is a collection of microscopic DNA spots attached to a solid surface. Scientists use DNA microarrays to measure the expression levels of large numbers of genes simultaneously or to genotype multiple regions of a genome. Each DNA spot contains picomoles ( $10^{-12}$  moles) of a specific DNA sequence, known as probes (or reporters or oligos).

Molecular nanotechnology (MNT) is a technology based on the ability to build structures to complex, atomic specifications by means of mechanosynthesis. This is distinct from nanoscale materials. Based on Richard Feynman's vision of miniature factories using nanomachines to build complex products (including additional nanomachines), this advanced form of nanotechnology (or molecular ...

This app note shows you how to set up the UMIK-1 and Room EQ Wizard (REW) on Windows, together with a device with HDMI input such as an A/V receiver or a miniDSP home theater processor. This enables you to select individual output channels for use in measuring and equalizing a home theater or multi-channel surround system.
